Research Paper - Zoology

ABSTRACT

Sina- Kolegaon Prakalp is most important source of drinking water and capture fishery in this region. Fishes were collected during January 2017 to December 2017. The total number of 24 fish species belonging to 15 genera, 6 orders and 8 families were recorded in this region. The order Cypriniformes was dominate. With 12 species to be followed by order Channiforms with 4 species, Siluriforms with 3 species. Chupeiformes and performed with two species each and order Mastacembeliforms was represented by single species in this region. The result shows rich fish diversity occurring in this stretch of the praklap.

Key words : Ichthyofauna, Sina- Kolegaon, Paranda.

Introduction :

Reservoirs fishery in India is also important from social economic point of view assist has the potential providing employment to about millions people. The lakes, Reservoirs and prakalp are constructed by impounding the river system. These are constructed for effective utilization of water for irrigation, drinking water flood control
